Genome polyprotein [Contains: Capsid protein C (Core protein) (P22);
Envelope glycoprotein El (GP32) (GP35); Envelope glycoprotein E2 (GP68) (GP70) (NS1); Protein P7; Nonstructural protein NS2 (P21)
(EC 3.4.22.-); Protease/helicase NS3 (P70) (Hepactvirin)
(EC 3.4.21.98); Nonstructural protein NS54 (P4); Nonstructural protein NS54 (P3); Nonstructural protein NS54 (P56); Nonstructural protein NS58 (P56); Nonstructural protein NS58 (P56); Relative Control (P70) (RNA-directed RNA polymerase) (EC 2.7.7.48)].
Hepatitis C virus (isolate Taiwan) (HCV).
Viruses; SSRNA positive-strand viruses, no DNA stage; Flaviviridae;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       between the

VITUS RES. 23:39-53(1992).

C --- FUNCTION: THE SMALL PROTEINS NS2A, NS2B, NS4A AND NS4B ARE CHYDROPHOBIC, SUGGESTING A POSSIBLE MEMBRANE-RELATED FUNCTION NS3 AND NS5 MAY PLAY A ROLE IN THE VIRAL RNA REPLICATION.

C --- CATALYTIC ACTIVITY: Hydrolysis of four peptide bonds in the P6 position, Cys or Thr in P1 and Ser or Ala in P1'.

C --- CATALYTIC ACTIVITY: N nucleoside triphosphate - N diphosphate C PROTEIN C ACTIVITY: N nucleoside triphosphate - N diphosphate C RNA)(N).

C --- SUBUNIT: THE VIRION OF THIS VIRUS IS A NUCLEOCAPSID COVERED LIPOPROTEIN ENVELOPE. THE ENVELOPE CONSISTS OF TWO PROTEINS: PROTEIN C AND MRNA.

C --- SIMILARITY: THE PROTEASE BELONGS TO PEPTIDASE FAMILY S29.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         HSSP; P2

Love R.A., Parge H.E., Wickersham J.A., Moomaw E.W., Adachi T., Hostomska Z.; "The crystal structure of hepatitis C vitrypsin-like fold and a structural zinc cell 87:331-342(1996).
                                                                                                                                                                                                                                                                                                                                                                                                                        Genome polyprotein (Contains: Capsid protein C (Core protein) (P22);
Envelope glycoprotein E1 (GP32) (GP35); Envelope glycoprotein E2
(GP68) (GP70) (NS1); Protein P7; NS1 (P70) (Hepaclvirin)
(EC 3.4.22.-); Protease/helicase NS3 (P70) (Hepaclvirin)
(EC 3.4.21.98); Nonstructural protein NS4A (P4); Nonstructural protein
NS4B (P27); Nonstructural protein NS5A (P56); Nonstructural protein
NS4B (P27); Nonstructural protein NS5A (P56); Nonstructural protein
NS5B (P66) (P70) (RNA-directed RNA polymerase) (EC 2.7.7.48)].
Hepatitis C virus (isolate EX) (HCV).

Viruses; SSRNA positive-strand viruses, no DNA stage; Flaviviridae;
  Yan Y., Li Y., Munshi S., Sardana V., Cole J.L., Sardana M.,
Steinkuehler C., Tomei L., de Francesco R., Kuo L.C., Chen Z.;
"Complex of NS3 protease and NS4A peptide of BK Strain hepatitis virus: a 2.2-A resolution structure in a hexagonal crystal form."
Protein Sci. 7:837-847(1998).
-i- FUNCTION: THE SMALL PROTEINS NS2A, NS2B, NS4A AND NS4B ARE
HYDROPHOBIC, SUGGESTING A POSSIBLE MEMBRANE-RELATED FUNCTION.
NS3 AND NS5 MAY PLAY A ROLE IN THE VIRAL RNA REPELICATION.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      P26663;
